

Highly-skilled statisticians & programmers. Collaborative work style. Flexible, responsive service.

BIOSTATISTICS AND STATISTICAL PROGRAMMING COMPETENCIES are essential to the clinical development operations of pharmaceutical, biotech, and medical device companies. BioBridges' **STATConnect™** service enables emerging firms to apply best-of-breed statistical expertise without costly and unnecessary infrastructure while adhering to budgetary constraints, changing needs, and tighter timelines.

Several favorable differences exist between our STATConnect “insourcing” model and traditional models of project outsourcing or comprehensive company-wide outsourcing:

- **Caliber of talent.** All STATConnect consultants are established senior-level professionals, which means each client receives an “A” team. Many also have extensive experience on the client side. All undergo an extensive vetting process before becoming a STATConnect consultant.
- **Highly responsive customer service.** STATConnect doesn't have a lumbering corporate bureaucracy. When our clients have questions or concerns, we deliver timely and helpful service. Our hands-on management team consists of very senior, well-known industry professionals who make it a priority to understand your project and needs.
- **Flexibility of the relationship.** STATConnect employs a flexible time and materials delivery model, which means if your workload varies from week to week, you'll pay only for work completed. This also greatly simplifies changes in scope, which can often generate voluminous amounts of paperwork and additional negotiation in a traditional outsourcing relationship.
- **Instant support structure, network, and management.** STATConnect works hard to understand how you operate and becomes an extension of your internal team with a built-in support structure you can rely on for broad expertise, deep experience, and seasoned leadership.
- **Add statistical processes to an existing quality system.** STATConnect consultants come with all the tools and expertise to add statistical processes to any existing quality system. Don't have an SOP infrastructure? We can instantly equip you with a basic one at no additional cost.

“

Working in a virtual pharmaceutical company provides exposure to numerous vendors and a unique perspective for evaluating the services they provide. BioBridges' STATConnect took the time to understand the details and needs of my project, and tailored their services to ensure the desired outcome was achieved. This coupled with timely, accurate communication resulted in a shortened timeline and cost savings, making for a truly successful engagement.”

The STATConnect™ Team

STATCONNECT'S BIOSTATISTICIANS ARE SKILLED IN A BROAD RANGE OF DISCIPLINES

beyond just biostatistics. Many have extensive experience in product development, clinical development, and regulatory negotiations. They've also attained advanced degrees in their fields and participated in hundreds of preclinical and clinical trials. Their extensive experience from NDAs, ARs, BLAs, PMAs, and 510(k)s to protocols, scholarly papers, and patents.

Our statistical programmers, meanwhile, also have advanced degrees and combine for over 60 years of experience in SAS and general programming in the academic, product development, and biopharmaceutical environments.

StatConnect consultants offer the expertise you need when and where you need it.

“ What’s being said about BioBridges... ”

“Working with a small company can be challenging as we have high demands and move quickly. Our project required biostatistical expertise with flexibility and responsiveness, not an easy combination to find. The STATConnect team provided the expertise we required with an efficient work process and great communication throughout our collaboration — it has been a great success!”

HILLORI CONNORS | *Program Leader* | *Resolvix Pharmaceuticals, Inc.*

“We recently had the opportunity to work with a biostatistician from BioBridges STATConnect on some complex and critical statistical issues related to our Phase 3 program. We received sound, frank advice that considered both the statistical and regulatory aspects of the issues and was instrumental in helping us achieve resolution. The arrangements with STATConnect consulting were flexible, timely and very responsive to our sense of urgency.”

JON HADDAD | *Sr. Director, Biometrics* | *Synta Pharmaceuticals*
